

# ***Assessing Success and Uptake for New Standards in Cloud and Grid Computing***

**Alan Sill**

Vice President of Standards, OGF

Senior Scientist, High Performance Computing Center  
and Adjunct Professor of Physics  
Texas Tech University

***Globus World***  
**April 17-18, 2013**

# About the Open Grid Forum:

**Open Grid Forum (OGF)** is a leading global standards development organization operating in the areas of cloud, grid and related forms of advanced distributed computing.

The OGF community pursues these topics through an **open process** for development, creation and promotion of relevant specifications and use cases.

OGF actively engages partners and participants throughout the international arena through an **open forum with open processes** to champion architectural blueprints related to cloud and grid computing.

The resulting specifications and standards enable **pervasive adoption of advanced distributed computing techniques** for business and research worldwide.

# History and Background

- OGF began in 2001 as an organization to promote the advancement of distributed computing worldwide.
- Grid Forum --> Global Grid Forum --> GGF + Enterprise Grid Alliance --> formation of OGF in 2005.
- Mandate is to take on **all forms of distributed computing** and to work to promote cooperation, information exchange, **best practices in use and standardization**.
- OGF best known for a series of important computing, security and network standards that form the basis for major science and business-based distributed computing (BES, GridFTP, DRMAA, JSDL, RNS, GLUE, UR, etc.).
- Have also been working on cloud and Big Data standards (OCCI, WS-Agreement, DFDL, etc.) for several years.
- Cooperative work agreements with other SDOs in place.

- OGF has extensive set of applicable standards related to federated community grid and cloud computing:
  - Federated Identity Management (FedSec-CG)
  - Managing the Trust Eco-System (CA operations, AuthN/AuthZ)
  - Virtual Organizations (VOMS)
  - Job Submission and Workflow Management (JSDL, BES)
  - Network Management (NSI, NML, NMC, NM)
  - Secure, fast multi--party data transfer (GridFTP, SRM)
  - Data Format Description (DFDL)
  - Service Agreements (WS-Agreement, WS-Agreement Negotiation)
  - Cloud Computing interfaces (OCCI)
  - Distributed resource management (DRMAA, SAGA, etc.)
  - Firewall Traversal (FiTP)
  - Others under development
- Working to gather this information to form an organized description of OGF work - an OGF **“Cloud Portfolio”**.

# OGF Standards In Use In Industry:

- DRMAA: Distributed Resource Management Application API  
Grid Engine, Open Grid Scheduler: (open source); TORQUE and related products: *Adaptive Computing*; PBS Works: *Altair Engineering*; Gridway: *DSA Research*; Condor: U. of Wisconsin / *Red Hat*;
- OGSA® Basic Execution Service Version 1.0 and BES HPC Profile:  
BES++ for LSF/SGE/PBS: *Platform Computing*; Windows HPC Server 2008: *Microsoft Corporation*; PBS Works - (client only): *Altair Engineering*;
- JSDL: Job Submission Description Language (family of specifications):  
BES++ for LSF/SGE/PBS and Platform LSF: *Platform Computing*;  
Windows HPC Server 2008: *Microsoft Corporation*; PBS Works - (client only): *Altair Engineering*;
- WS-Agreement (family of specifications):  
ElasticLM License-as-a-Service: *ElasticLM*; BEinGrid SLA Negotiator,  
LM-Architecture and Framework: (Multiple partners); BREIN SLA  
Management Framework: (Multiple partners); WSAG4J, Web Services  
Agreement for Java (framework implementation): *Fraunhofer SCAI*.

# Example: Worldwide LHC Computing Grid

# XSEDE: The Next Generation of US Supercomputing Infrastructure

## The Role of Standards for Risk Reduction and Inter-operation in XSEDE

Andrew Grimshaw

OGF standards  
power some of  
the largest  
supercomputing  
infrastructures  
in the world!

# XSEDE

Extreme Science and Engineering  
Discovery Environment

XSEDE cloud  
infrastructure still  
being written

# XSEDE Services Layer:

## Simple services combined in many ways

- Resource Namespace Service 1.1
- OGSA Basic Execution Service
- OGSA WSRF BP – metadata and notification
- OGSA-BytelIO
- GridFTP
- JSDL, BES, BES HPC Profile
- WS Trust Secure Token Services
- WSI BSP for transport of credentials
- ... *(more than we have room to cover here)*

Examples – (not  
a complete list)

*Basic message (AFS): XSEDE represents a phase change in the engagement of OGF standards with US cyberinfrastructure.*

# Why Open Standards?

- *Risk reduction*
- *Best-of-breed mix-and-match*
- *Allows innovation/competition at more interesting layers*
- *Facilitates interoperation with other infrastructures*

## Takeaway message

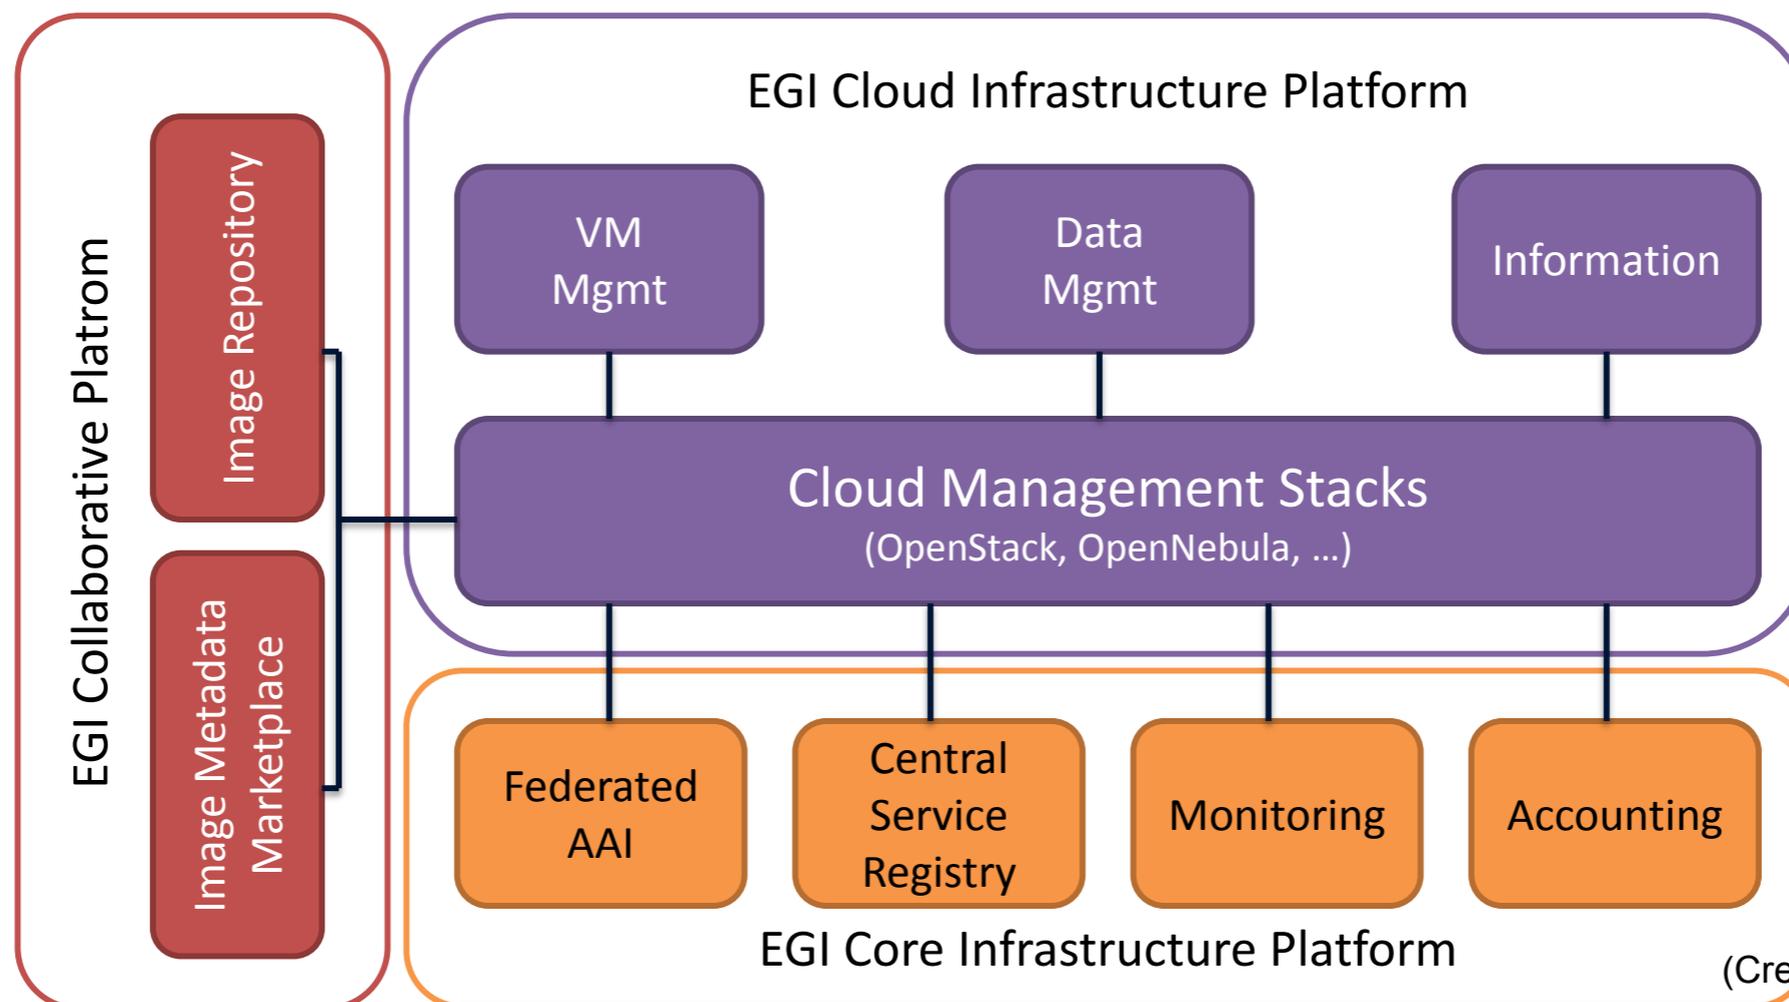

- *The use of standards permits XSEDE to interoperate with other infrastructures, reduces risks including vendor lock-in, and allows us to focus on higher level capabilities and less on the mundane*

# EGI Cloud Architecture:

## Architecture

Enable an open ecosystem of services

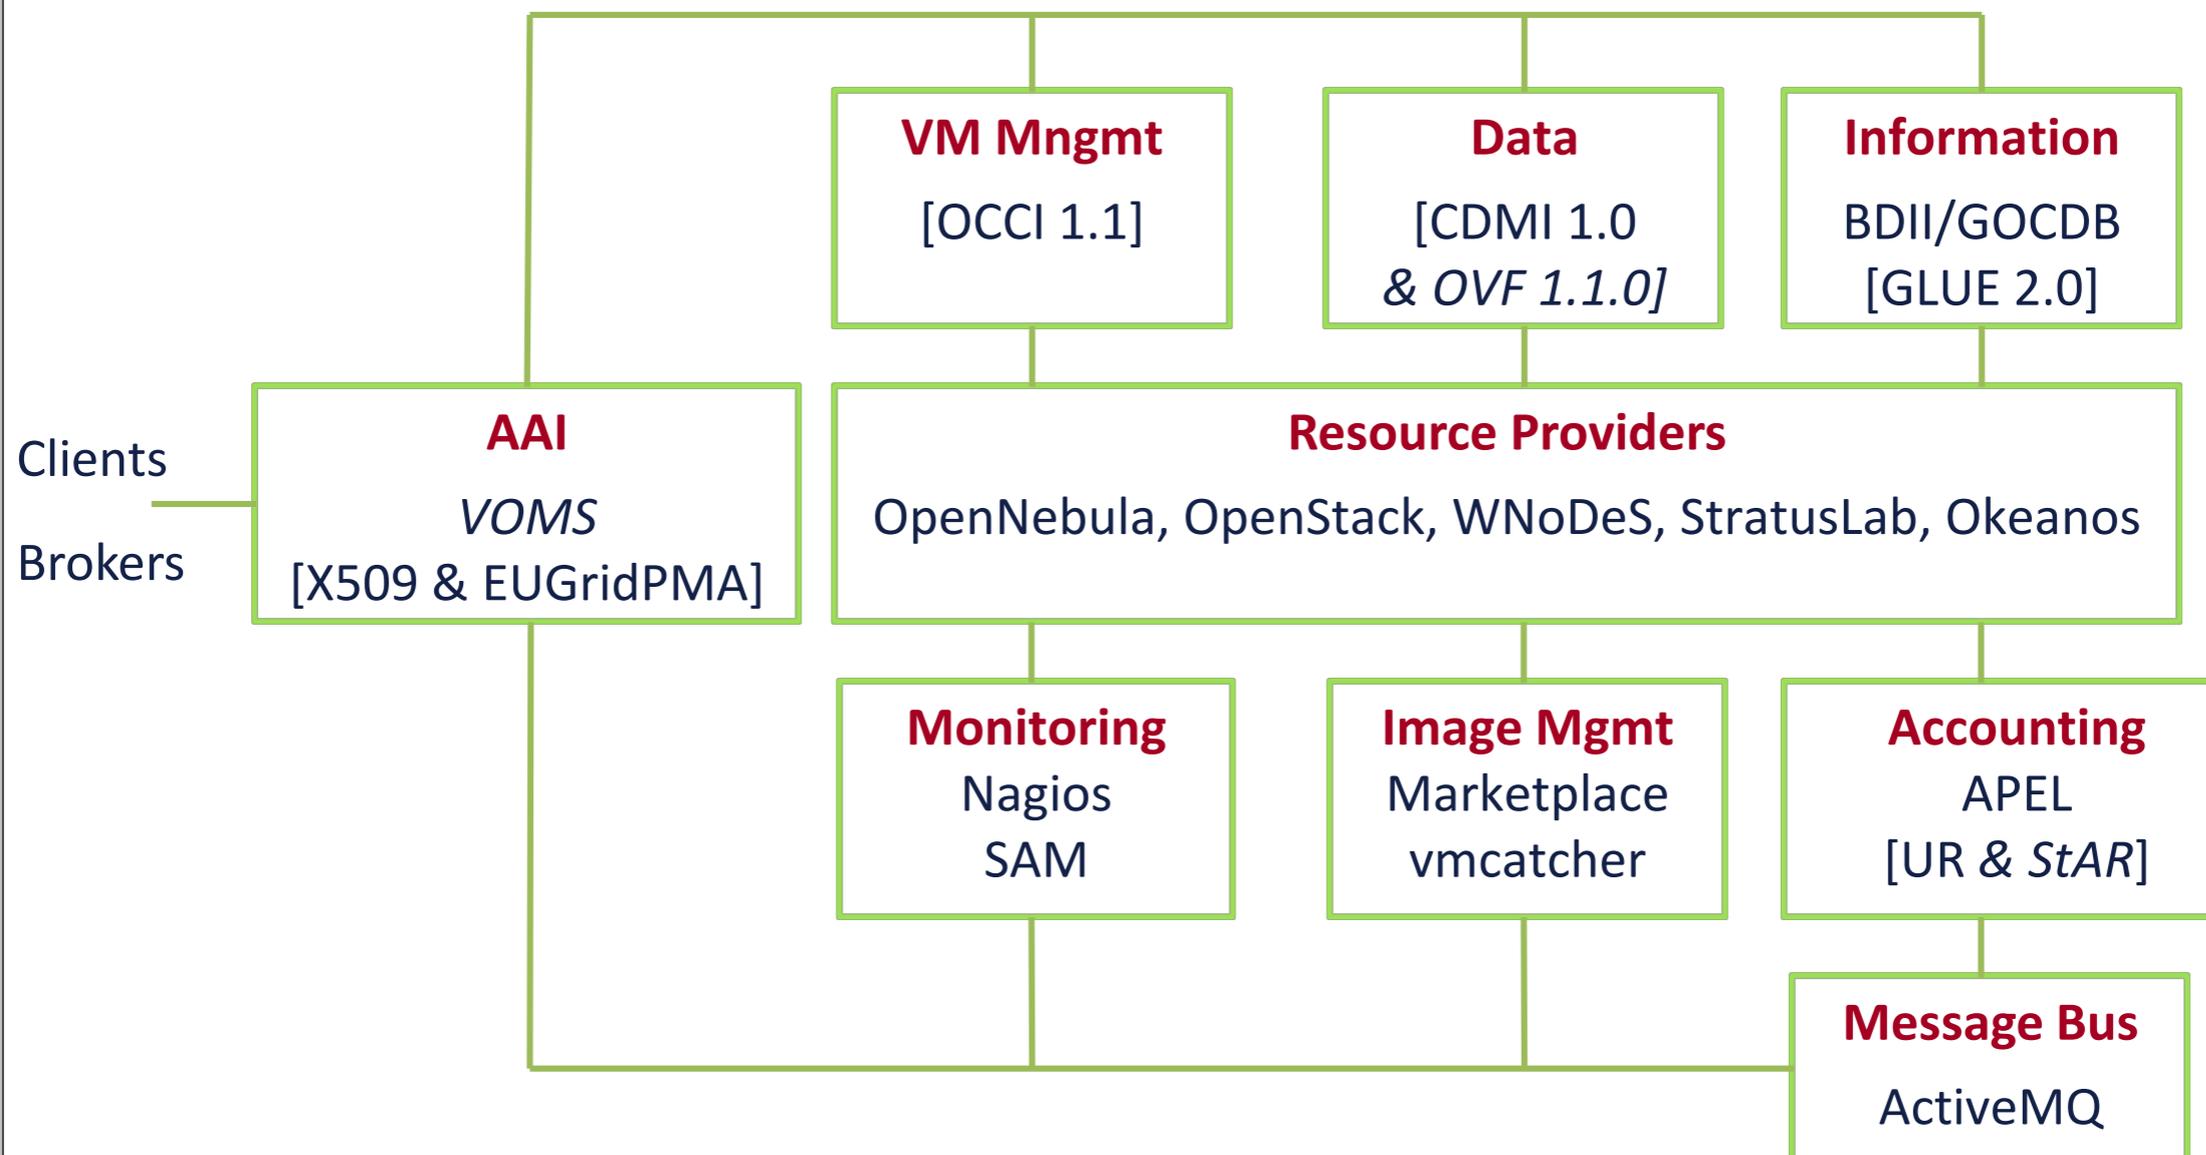

(Credit: Steven Newhouse)

# EGI Services & Standards:

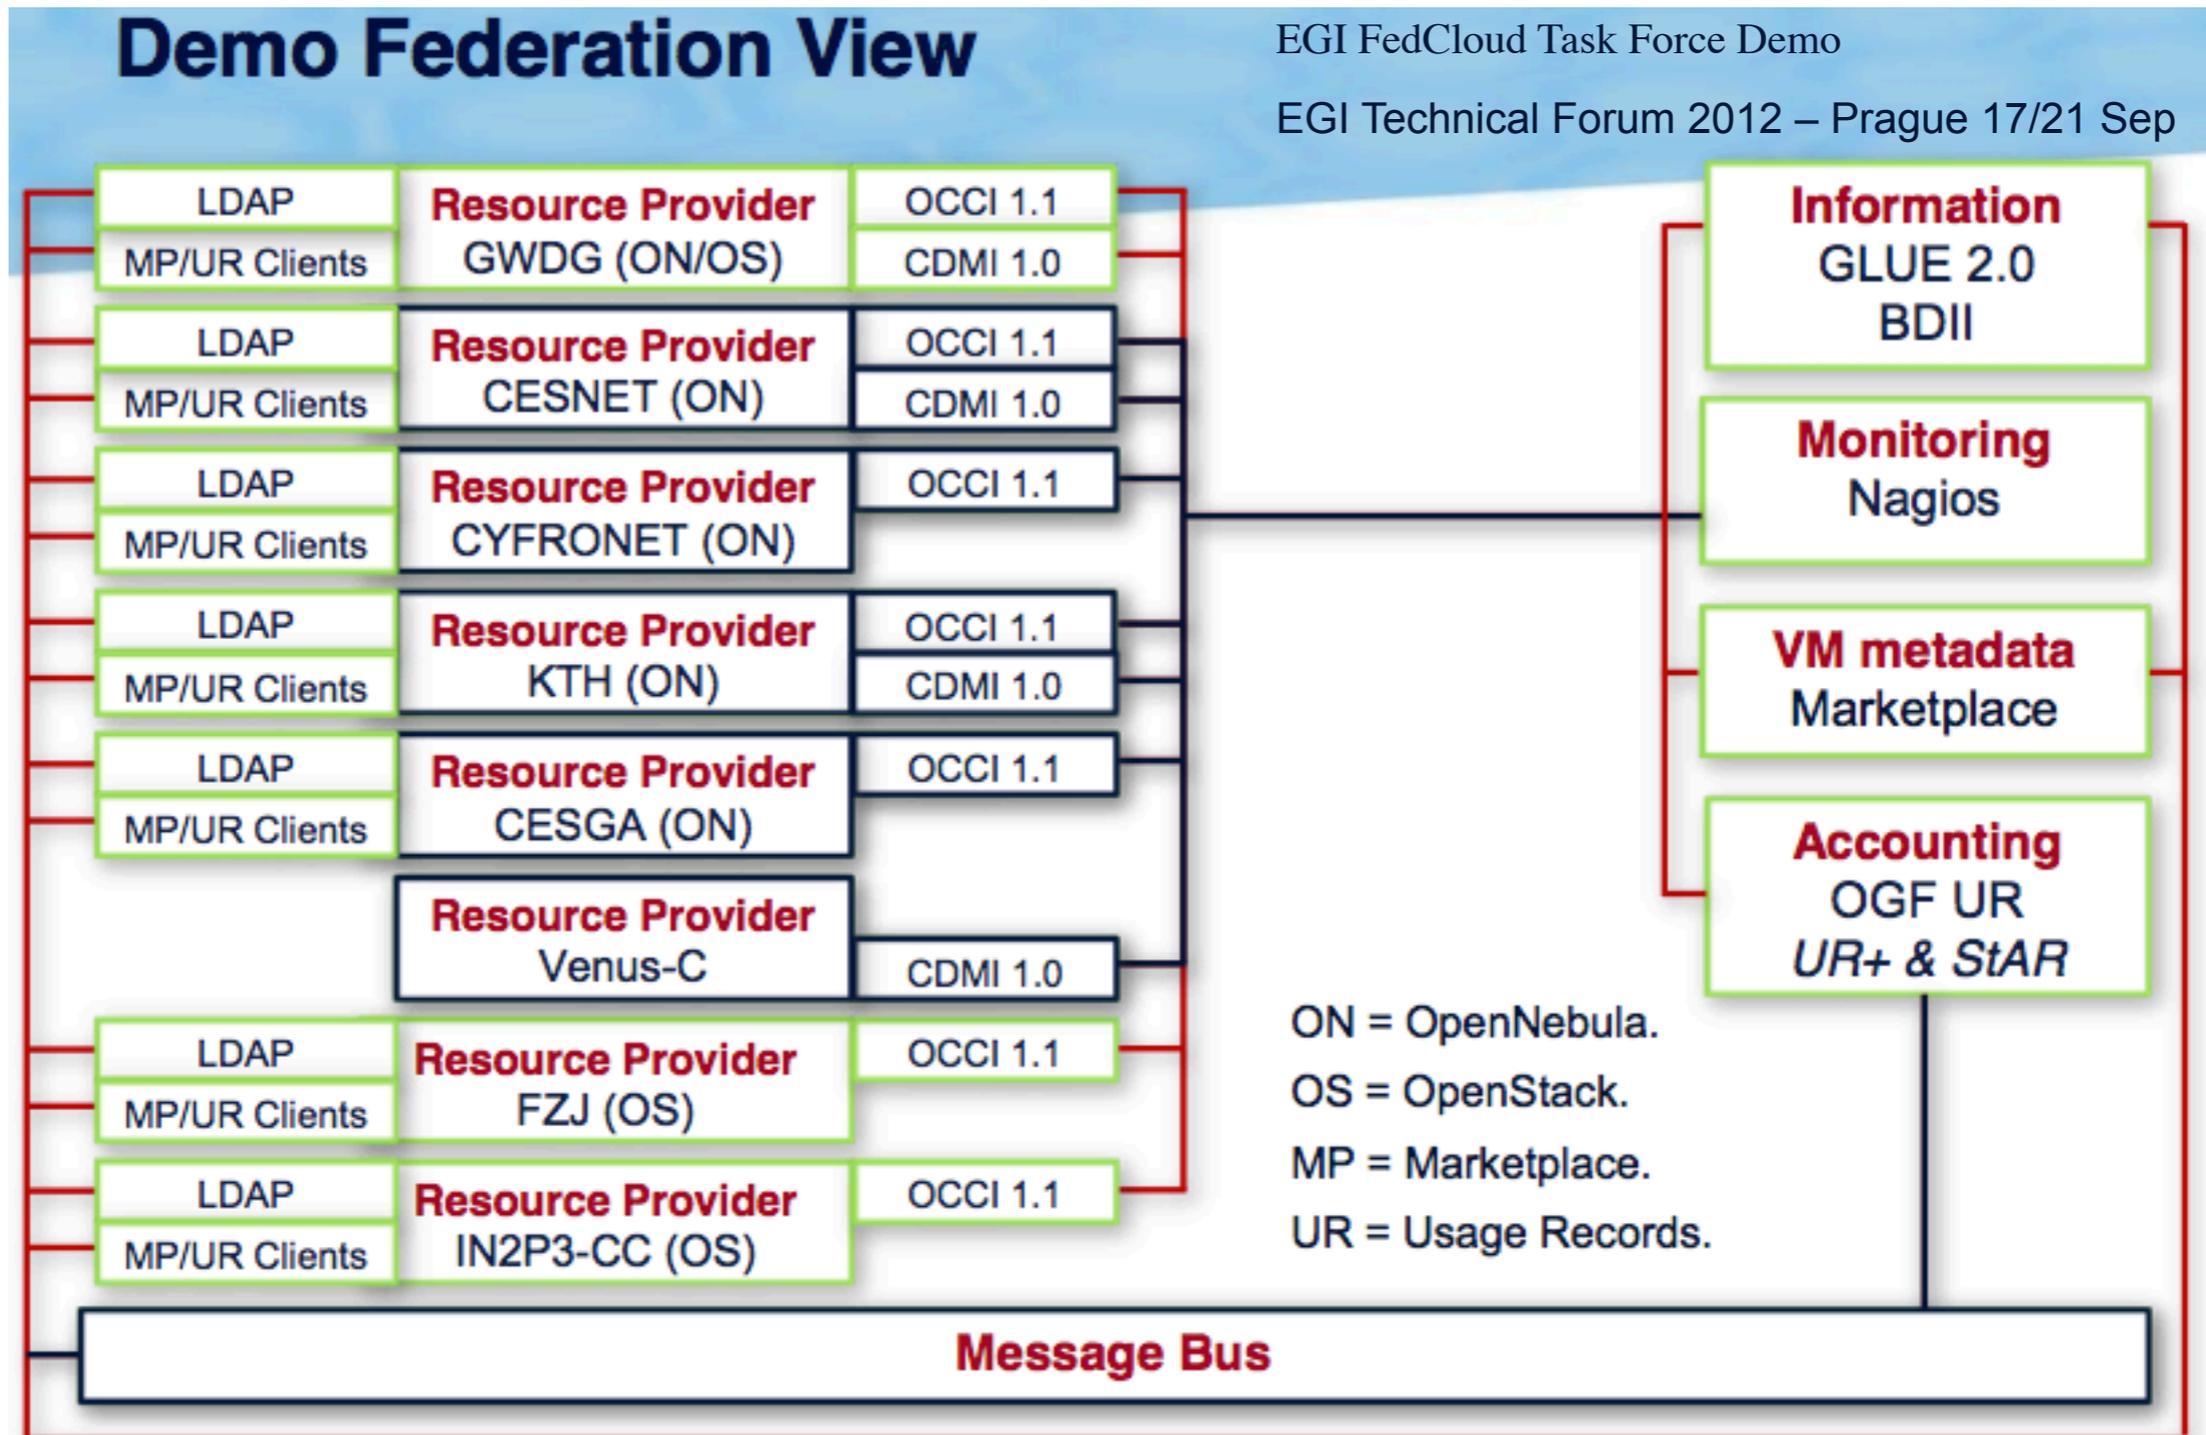

## Services [& Standards]

(Credit: Steven Newhouse)

# Example of EGI Standards Use: EGI Federated Cloud

# Uptake of OGF Cloud Standards In Industry:

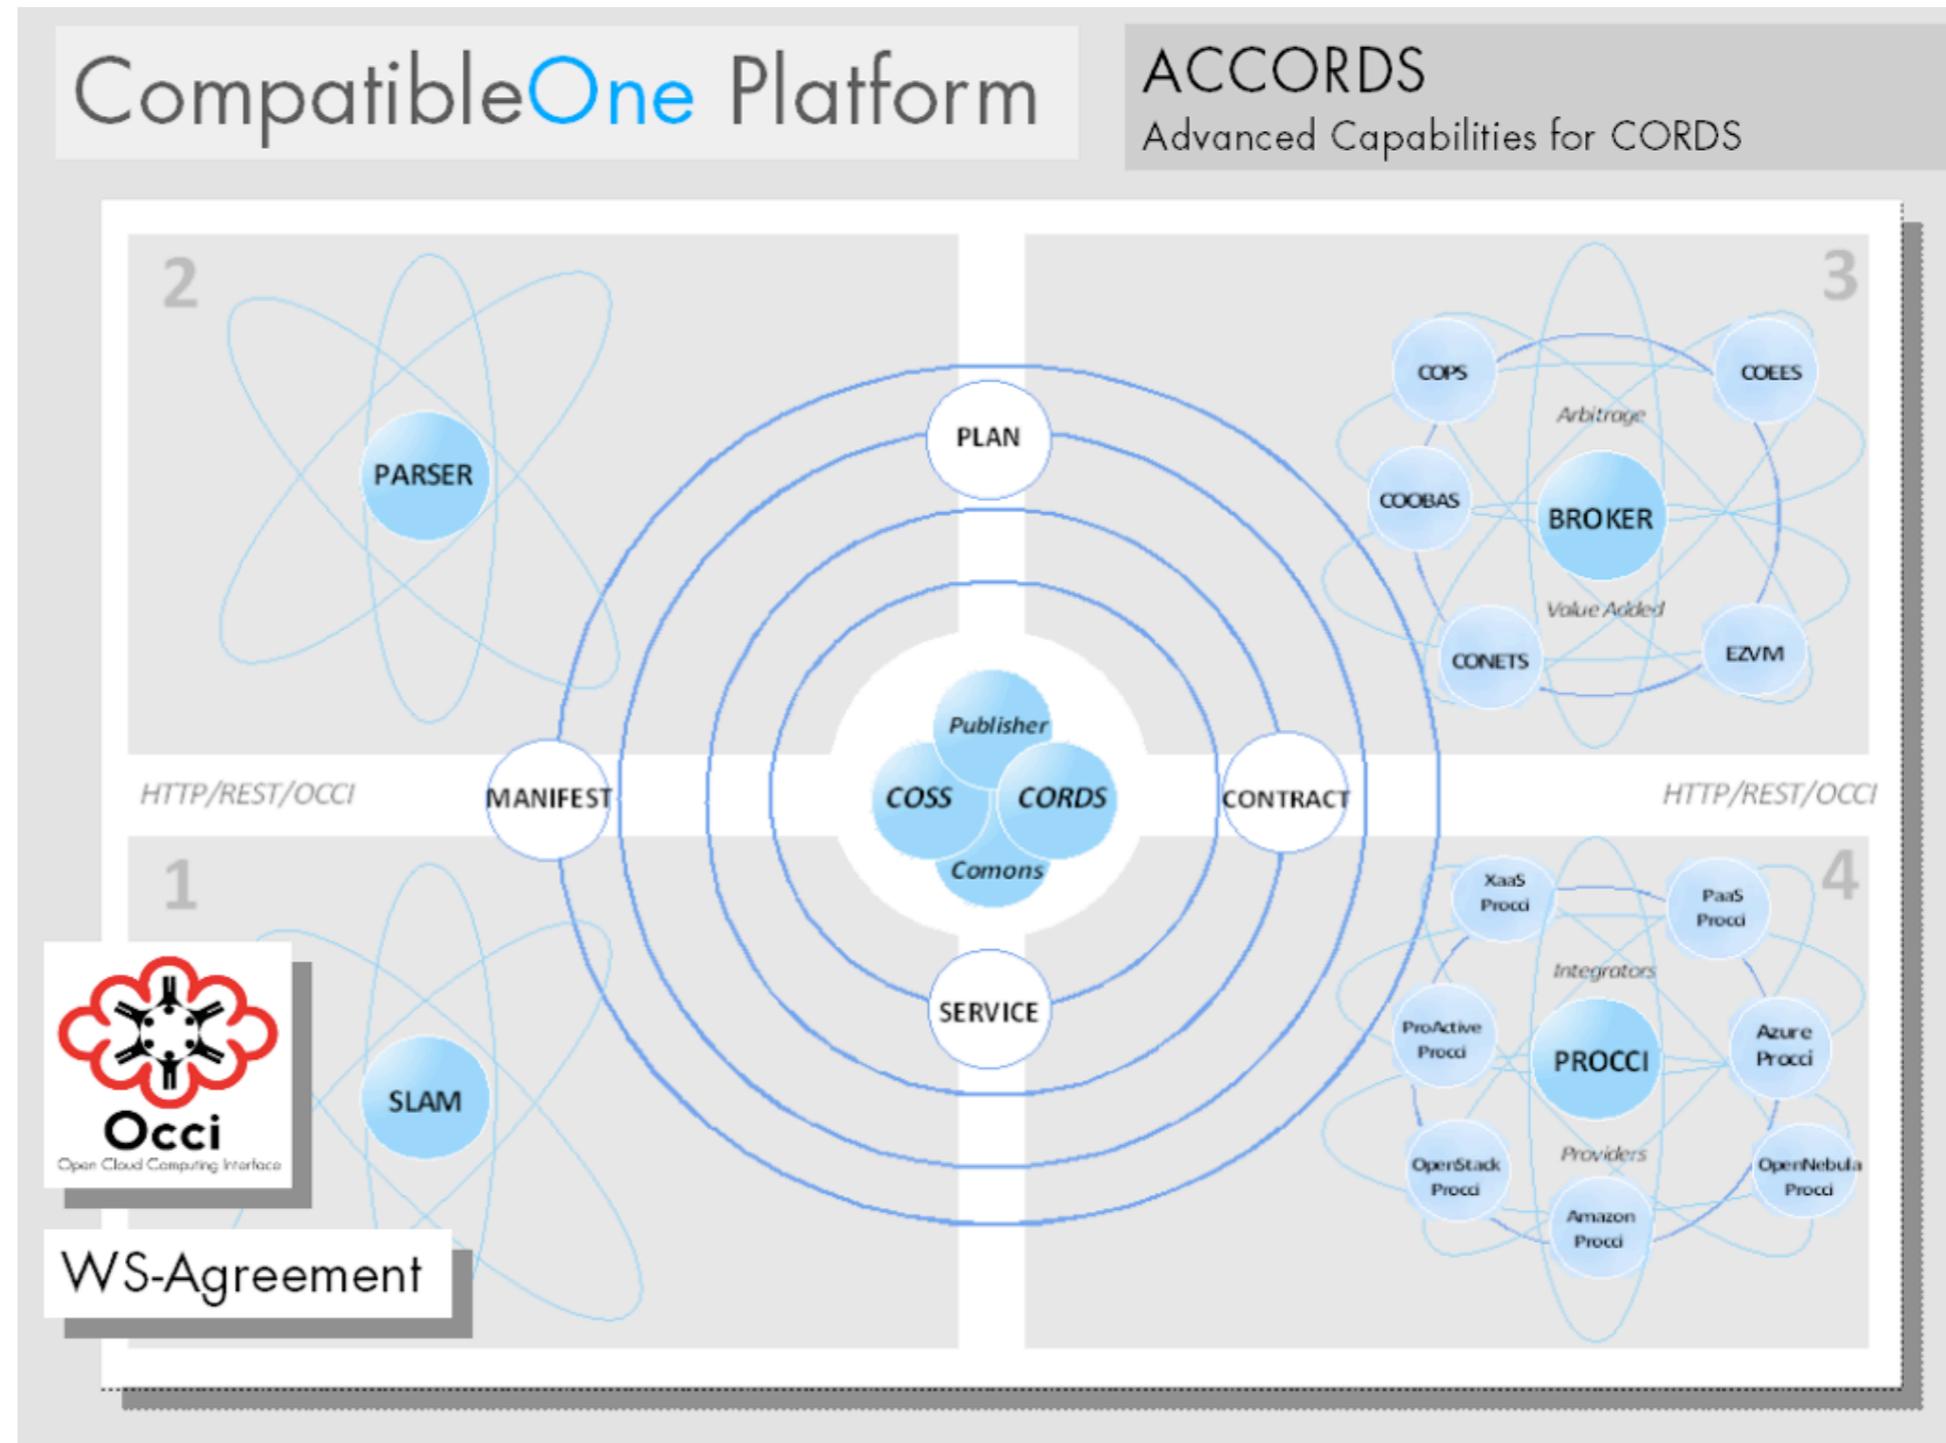

Example:

## CompatibleOne

Open Source Cloud Broker project started by industry consortium based in France

Product line heavily based on published OGF standards (OCCI, WS-Agreement, etc.)

# OGF Cooperative Agreements In Place as of Early 2013

## *OGF and DMTF:*

- OGF published the the OCCl Core, Infrastructure and HTTP Rendering specifications as GFD.183, 184 and 185, and is working on a JSON rendering. We created a joint work register with DMTF on OCCl and CIMI and continue to follow their progress towards implementation and testing of the CIMI specification.

## *OGF and ISO:*

- OGF has a Category A liaison with ISO JTC1 SC38 on Cloud Computing and is working with ISO on joint activities.

## *OGF and SNIA (CDMI):*

- OGF has cooperative agreement w/SNIA with respect to CDMI and has co-hosted 8 Cloud Plugfests so far (series continues).

# OGF Cooperative Agreements In Place as of Early 2013

## *OGF and OCEAN:*

- OCEAN has joined the Cloud Plugfest series as a co-sponsor and as one of the primary sponsors of the upcoming September 2013 Cloud Interoperability Week.

## *OGF and OW2:*

- OW2 is also co-sponsoring the 9/2013 Cloud Interoperability Week & planning to join the Cloud Plugfest series as a formal co-sponsor & active supporter of Open-Source cloud projects.

## *OGF and XSEDE:*

- Co-locating OGF 38 (most tracks) with XSEDE 2013 - networking to meet at TNC'13.

## *OGF and EGI:*

- Co-locating OGF 39 + Cloud Interoperability Week at EGI TF.

# OGF Cooperative Agreements In Place as of Early 2013

## *OGF and ETSI:*

- Cooperative MoU in place; contributing to ETSI CSC effort. ETSI has joined the Cloud Plugfest series as a co-sponsor.

## *OGF and ITU-T:*

- OGF formal liaison with ITU-T JCA Cloud.

## *OGF and TM Forum:*

- MoU in place; ongoing cross-SDO work on on End-to-End Management of Cloud Service Agreements, including SLAs.

## *OGF and CSA:*

- Cooperative agreement between OGF and CSA in place.

## *OGF and IEEE:*

- OGF co-sponsored IEEE Cloudcom conferences in 2011 (Athens) and 2012 (Taipei); pursuing other engagements.

## About Cloud Plugfests

The Cloud Interoperability Plugfest project (or "Cloud Plugfests" for short) is a series designed to promote interoperability efforts on cloud-based software, from among vendors, products, projects and implementations. The series supports ongoing and continuing interoperability efforts among and between the sponsoring organizations, and with the cloud community at large. These efforts include organized software demonstrations, in-person developer gatherings, and continuous access to professional-grade cloud testing frameworks and tools.

The July 2013 event will take place at the DMTF Alliance Partners Technical Symposium. This will be the **ninth** in the ongoing Cloud Plugfest series, which is proudly co-organized by the Open Grid Forum (OGF), the Storage Networking Industry Association (SNIA), the Cloud Storage Initiative, the European Telecommunications Standards Institute (ETSI) and the Open Cloud for Europe, JAPAN and beyoNd (OCEAN) Project.

Continuing our long-standing pattern of providing multiple convenient opportunities for participation, remote participation by registrants from other organizations and locations is supported at Cloud Plugfests, subject to the conditions of the participation agreement.

## Register for the event!

### Purpose

- **Interoperability Testing**
- **Software Development**
- **Community-Based Bug-Finding**
- **Standards Adoption**

### News

# Upcoming Events - 2013

- **Terena Networking Conference** June 3-6, 2013 in Maastricht, Netherlands (**OGF 38** part A - Networking)
- **XSEDE 2013** July 22-25, 2013 in San Diego, California (OGF working group meetings track = **OGF 38** part B)
- **Cloud Plugfest 9** as DMTF Alliance Partners Technical Symposium (APTS) July 22-26, 2013 in Portland, Oregon.
- **Autonomic Management of Grid & Cloud Computing** (AMGCC'13) workshop - part of ACM Cloud & Autonomic Computing Conference August 5-9, 2013 in Miami, Florida.
- **Federative & Interoperable Cloud Infrastructures** (FedICI'13) workshop Aug. 26/27 2013, Aachen, Germany organized in conjunction with Euro-Par 2013.
- **OGF 39** co-located with **EGI Technical Forum** September 16-20, 2013 in Madrid, Spain including **Cloud Plugfest 10 & Cloud Interoperability Week** (OGF/SNIA/ETSI/OCEAN/OW2)

# Conclusions

- **OGF** actively engages **many partners** and participants throughout the international arena through an **open forum** with open processes to promote **best practices and standards in advanced distributed computing**.
- **OGF** occupies an **important role in standards** and software development with *significant uptake* in advanced distributed computing, including cloud, grid, networking and large-scale data processing, transfer and handling.
- **OGF standards** support a wide variety of flexible architectures for advanced scientific and business uses.
- **OGF's extensive experience** has enabled distributed computing built on these architectures to provide *more flexible, efficient and utility-like global infrastructures*.
