whoami Show the currently logged-in identity.		version	Show the version and exit
		whoami	Show the currently logged-in identity.

### Open source, uses Python SDK

docs.globus.org/cli github.com/globus/ globus-cli

### Demonstration Globus CLI

## How do I go beyond simple scripts?

### Globus Platform Transfer API

# Useful developer links > github.com/globus > docs.globus.org

### Globus Transfer API

- Globus Web App consumes public Transfer API
- Globus APIs use JSON for documents and resource representations
- Resource named by URL (standard REST approach)
   Query params allow refinement (e.g., subset of fields)
- Requests authorized via OAuth2 access token

   Authorization: Bearer asdflkqhafsdafeawk

### docs.globus.org/api/transfer

### Globus Python SDK

- Python client library for the Globus Auth and Transfer REST APIs
- globus\_sdk.TransferClient class handles connection management, security, framing, marshaling
  - from globus\_sdk import TransferClient
  - tc = TransferClient()

### <u>globus.github.io/globus-sdk-python</u>

### SDK provides wrapper around RESTAPI

- TransferClient low-level calls
  - post(), get(), update(), delete()

get(path, params=None, headers=None, auth=None,
response\_class=None)

- $\circ$  path path for the request, with or without leading slash
- $_{\odot}$  params dict to be encoded as a query string
- $_{\odot}$  headers dict of HTTP headers to add to the request
- response\_class class response object, overrides the client's default\_response\_class
- Returns: GlobusHTTPResponse object

### Anything you can do using Globus webapp...

- Endpoint search
- Endpoint management
- File operations (listing, rename ...)
- Task submission (transfer, sync ...)
- Task management
- Bookmarks
- Sharing and permission management
- Management Console

### Demonstration Jupyter Notebook

github.com/globus/globus-jupyter-notebooks

### How can I do this in my [science gateway, data portal, web app, ...]?

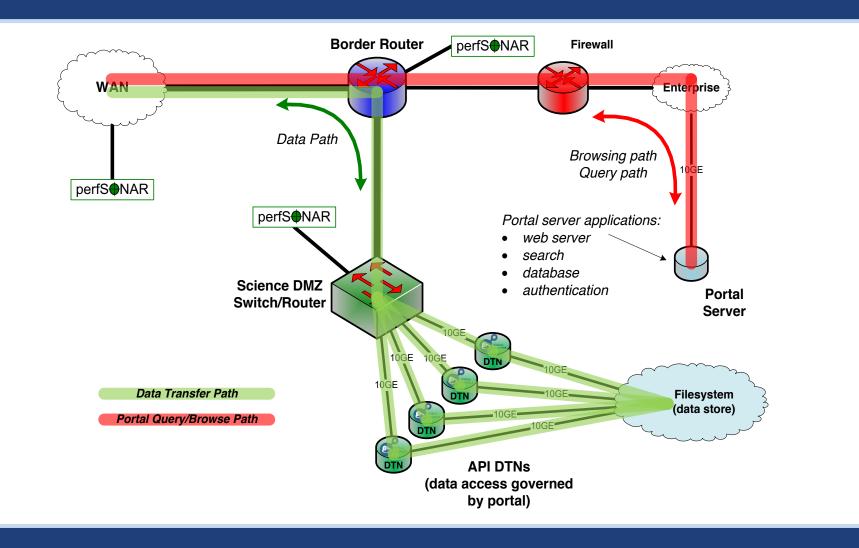

### Demonstration Modern Research Data Portal

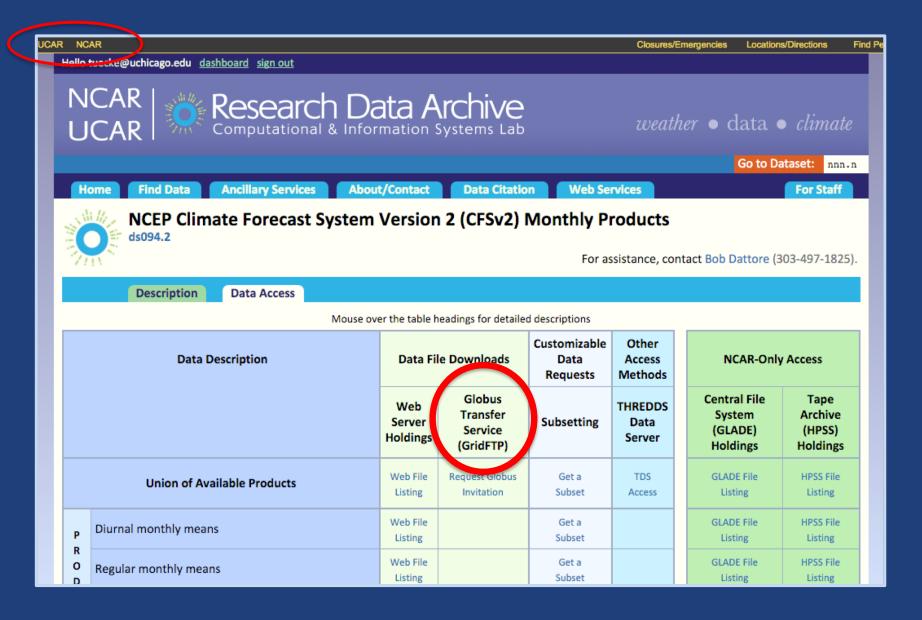

### Modern Research Data Portal helps maximize the value of the Science DMZ

### Modern data apps leverage the Science DMZ

#### fasterdata.es.net/

### Data access: NCAR RDA

### Data distribution: ARM Climate Research Facility

### Analysis app: Wellcome Sanger

Sanger Imputation Service Beta

Home About

Instructions - Resources Status

#### **Sanger Imputation Service**

This is a free genotype **imputation** and **phasing** service provided by the Wellcome Trust Sanger Institute. You can upload GWAS data in VCF or 23andMe format and receive imputed and phased genomes back. Click here to learn more and follow us on Twitter.

#### Before you start

#### Be sure to read through the instructions.

You will need to set up a free account with Globus and have Globus Connect running at your institute or on your computer to transfer files to and from the service.

#### Ready to start?

If you are ready to upload your data, please fill in the details below to **register an imputation and/or phasing job**. If you need more information, see the about page.

#### News

🕑 @sangerimpute

#### 11/05/2016

Thanks to EAGLE, we can now return **phased data**. The HRC panel has been updated to r1.1 to fix a known issue. See ChangeLog for more details.

#### 15/02/2016

Globus API changed, please see updated instructions.

#### 17/12/2015

New status page and reworked internals. See ChangeLog.

#### 09/11/2015

Pipeline updated to add some features requested by users. See ChangeLog.

See older news...

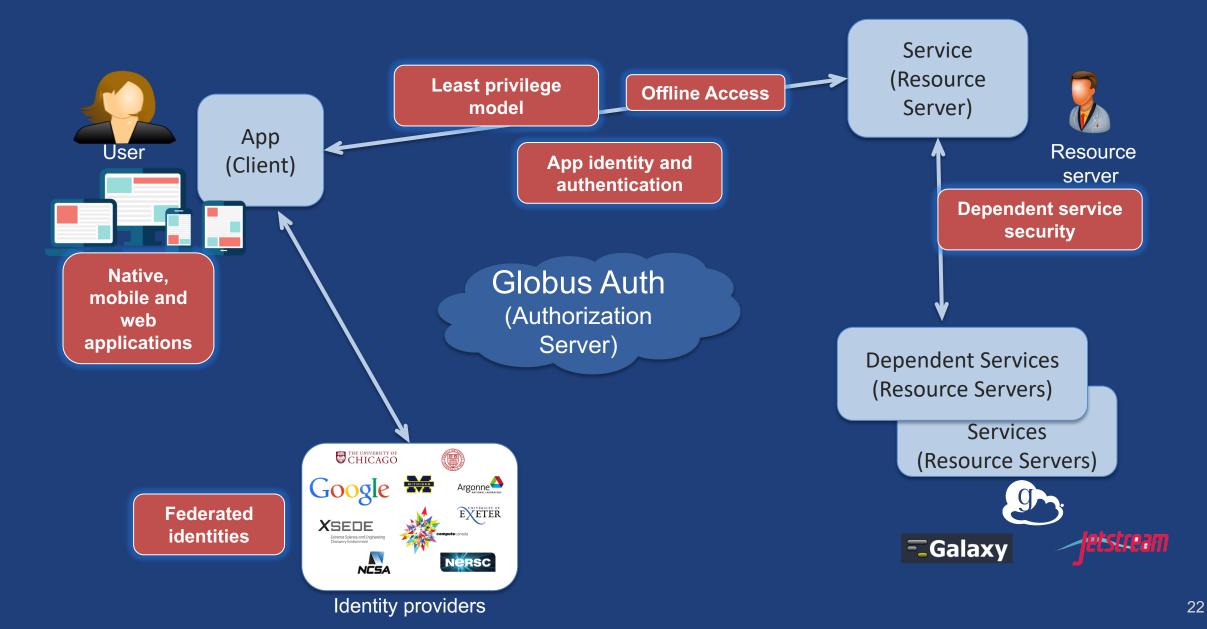

### Globus Platform Auth API

### Globus Auth: Foundational IAM service

- Enables login for diverse app ecosystem
- Simplifies creation/integration of apps, services
- Outsources mundane feature development
- Brokers authentication and authorization interactions
- Protects REST API communications
- No new identity required
- Employs least privileges security model
- Programming language and framework agnostic

### Globus Auth Features

### Based on widely used web standards

- OAuth 2.0 Authorization Framework (a.k.a. OAuth2)
- OpenID Connect Core 1.0 (a.k.a. OIDC)
- Access via OAuth2 and OIDC libraries of your choice

   Google OAuth Client Libraries (Java, Python, etc.), Apache mod\_auth\_openidc, etc.
  - Globus Python SDK

### Fundamental Concepts

- Scopes: APIs that client is requesting access to

   Scope syntax: OpenID Connect: openid, email, profile
   urn:globus:auth:scope:<service-name>:<scope-name>
- Consents: authorization client to access a service, within limited scope, on the resource owner's behalf

- Globus Account = Primary identity + Linked Identities
  - An identity can be primary on only one account
  - Identities can be linked to only one account
- Account does not have own identifier
  - An account is uniquely identified using its primary identity

- Client\_id and client\_secret for service
- App display name
- Declare required scopes
  - Need long-term, offline refresh tokens?
  - May require authorization from scope admin
- OAuth2 redirect URIs
- Links for terms of service & privacy policy
- Effective identity policy (optional)

developers.globus.org

### Use case: Calling services on user's behalf

- When to use: web apps able to store secrets

   e.g. portal initiating transfer, adding user(s) to shared endpoints
- Confidential client
  - Secret stored on web app server
- Authorization Code Grant
  - With service scopes
  - Can also request OIDC scopes
- Globus SDK:
  - To get tokens: ConfidentialAppAuthClient
  - To use tokens: AccessTokenAuthorizer

### Portal: FaceBase – Craniofacial data/resources

Globus Account Log In

#### FaceBase A Resource For Craniofacial Researchers

FaceBase uses Globus to provide account management services.

If you have an existing FaceBase account, log in as usual by selecting "Globus ID".

If you do not already have an account, log in using your organization or "Google" account.

If your organization is not listed, click "Globus ID" and then create a free account.

Your account must be approved before you may download FaceBase data. Sign up to use FaceBase Globus Web App with a login that you already have!

globus

#### Use your existing organizational login

e.g. university, national lab, facility, project, Google or Globus ID

#### University of Chicago

Didn't find your organization? Then use Globus ID to sign in. (What's this?)

Globus uses CILogon to enable you to Log In from this organization. By clicking Continue, you agree to the CILogon privacy policy and you agree to share your username, email address, and affiliation with CILogon and Globus. You also agree for CILogon to issue a certificate that allows Globus to act on your behalf.

- Globus Auth for single sign on and federated login
- Globus groups for access control on resources
- Globus branded site for consistent look and feel

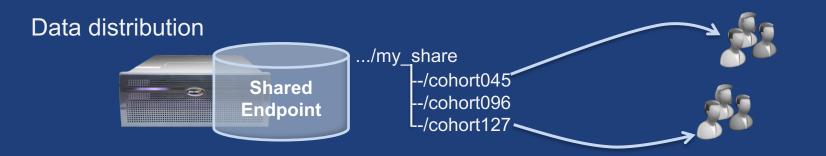

### Use case: Native apps

- When to use: any client that cannot keep a secret

   Command line, desktop apps, mobile apps. Jupyter notebooks
- Native app is registered with Globus Auth

   Not a confidential client
- Native App Grant is used
  - Variation on the Authorization Code Grant
- Globus SDK:
  - To get tokens: NativeAppAuthClient
  - To use tokens: AccessTokenAuthorizer

### Automation Example: Data distribution

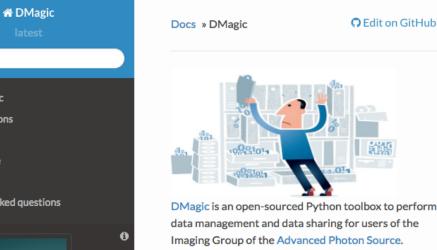

- Uses Auth and Transfer API via SDK
- Native app grant
- Client credential grant
  - Portal or service
  - Permission for the client id

### Data Distribution: APS - DMagic

### dmagic.readthedocs.io

Courtesy of Francesco De Carlo, Argonne National Laboratory (2016)

### Demo: Simple automation (REST API & CLI)

### github.com/globus/automation-examples

### See README for installation

- Using the RESTAPI: share\_data.py

   Stage data to a folder and set sharing ACL (user and/or group)
- Using the CLI: share\_data.sh
- Monitor and cleanup: cleanup\_cache.py

### Use case: Apps requiring long-lived access

- When to use: "offline services"
  - e.g. transfer working on your behalf even when you are offline
  - e.g. running command line app from script
  - -e.g. checking transfer status when user is not logged in
- App requests refresh tokens
- Globus SDK:
  - To get token: ConfidentialAppClient or NativeAppClient
  - To use tokens: RefreshTokenAuthorizer

### Automation Example: Repeated replication

- Using Globus CLI or SDK
- Meant to be run via cron or other task manager
- Native app grant

### github.com/globus/native-app-examples

### See README for installation

- ./example\_copy\_paste.py
  Copy paste code to the app
- ./example\_copy\_paste\_refresh\_token.py
  - Stores refresh token locally, uses it to get new access tokens

### Solutional Resource Access

### Identity Management

Home About - News - Developer Zone - KBase Labs

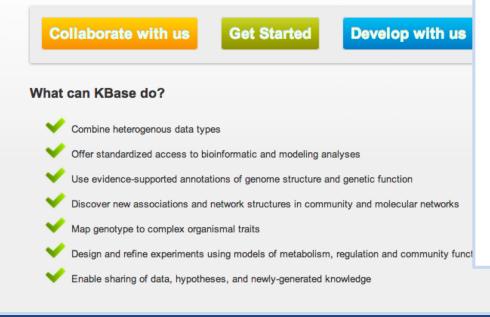

#### Search this site

Q

#### ci c**::**nnect

#### The new Systems Biology Knowledgebase (KBase) is a

collaborative effort designed to accelerate our understanding of microbes, microbial communities, and plants. It will be a community-driven, extensible and scalable ope source software framework and application system. KBase will offer free and open access to data, models and simulations, enabling scientists and researchers to build new knowledge and share their findings.

Accelerate research on campus by providing connective services for local, cloud and national cyberinfrastructure

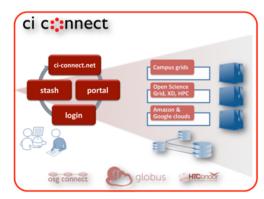

#### **Connecting Science to Cycles and Data**

CI Connect offers campus IT organizations connective services for cyberinfrastructure. End-users quickly gain access to shared campus clusters while gaining access to distributed resources of national HPC or HTC facilities (such as the Open Science Grid) or cloud-based resources. CI Connect offers several capabilities based on Globus, HTCondor and other HTC and data sharing technologies that augment your vision of providing scientific computational resources to research communities you support.

#### **Reliable, High Performance CI Services**

CI Connect provides services to CI providers at US universities and laboratories following a simple set of principles:

2013-02-25 Proposed: Genomic Science Contractors-Grantees Meeting

#### Connected environments from hosted services

Resources of a campus cluster (or campus grid) can be
